General Introduction	1-10		

Review of Literature 11-36

Aims and objectives of the present study

Chapter 1: Study of seasonal diversity and ethnomedicinal uses of mushrooms in Gurguripal Ecoforest 37-84

1.1. Introduction

1.2. Materials and Methods

- 1.2.1. Study area
- 1.2.2. Collection, identification and preservation of specimens
- 1.2.3. Statistical analysis of mushroom diversity
- 1.2.4. Ethnomycological survey

1.3. Results and Discussions

- 1.3.1. Distribution frequency
- 1.3.2. Diversity index
- 1.3.3. Ethnomycology

1.4. Conclusion

Chapter 2: Nutritional and bioactive potentials of selected mushrooms in Gurguripal Ecoforest 85-107

2.1. Introduction

2.2. Materials and Methods

- 2.2.1. Analysis of nutrients
- 2.2.2. Analysis of major phenolic compounds

- 2.2.3. Antioxidant assay
- 2.2.4. Fatty acid analysis
- 2.2.5. EDAX analysis

2.3. Results and Discussions

- 2.3.1. Nutrient content
- 2.3.2. Phenolic compounds
- 2.3.3. Antioxidant assay
- 2.3.4. Fatty acids
- 2.3.5. Elemental constituents

2.4. Conclusion

Chapter 3: Study of antibacterial potential, characterisation and efficacy enhancement of mushroom extract 108-132

3.1. Introduction

3.2. Materials and Methods

- 3.2.1. Preparation of mushroom extracts
- 3.2.2. Antibacterial activity of Mushroom Extracts
- 3.2.3. Biosynthesis and Characterization of Silver Nanoparticles
- 3.2.4. Antibacterial efficacy by silver nanoparticles
- 3.2.5. Partial purification by Column chromatography and Fraction collection
- 3.2.6. HPLC analysis
- 3.2.7. Isolation and purification of polysaccharide from *T. heimii*
- 3.2.8. Characterization of THP-I through LC-MS and NMR study
- 3.2.9. Determination of MIC and MBC
- 3.2.10. In vitro cytotoxicity assay

3.3. Results and Discussions

- 3.3.1. Antibacterial potential of mushroom
- 3.3.2. Antibacterial efficacy enhancement of mushroom extract through AgNps
- 3.3.3. Study of active constituents in *T. heimii*
- 3.3.4. Isolation, purification and antibacterial activity of crude polysaccharide
- 3.3.5. Spectroscopical analysis
- 3.3.6. MIC and MBC study of *T. heimii* extract

3.3.7. Cytotoxicity study of T. heimii extract

3.4. Conclusion

Chapter 4: Bactericidal mechanism of *p*-coumaric acid, a principal compound of *Termitomyces heimii*: A bioinformatics insight

133-174

4.1. Introduction

4.2. Materials and Methods

- 4.2.1. Study of Minimum Inhibitory Concentration (MIC) of p-CA against two human pathogenic bacteria
- 4.2.2. Sequence retrieval
- 4.2.3. Sequence selection
- 4.2.4. Tertiary structures prediction
- 4.2.5. Quality assessment of predicted structures
- 4.2.6. Ligand structure retrieval
- 4.2.7. Molecular Docking
- 4.2.8. Phylogenetic tree construction

4.3. Results and Discussions

- 4.3.1. Minimum Inhibitory Concentration (MIC) of p-CA
- 4.3.2. Analysis of Retrieved Trans-membrane Proteins
- 4.3.3. Tertiary Structure Prediction and Quality Assessment
- 4.3.4. Molecular Docking Analysis with p-CA
- 4.3.5. Sequential Comparison between trans-membrane proteins of *S. aureus* and *E. coli* through Phylogenetic Tree

4.4. Conclusion

Summary and Conclusion	175-181
