

LIST OF TABLES

Page No.

Table 3.1: Classification of children with anthropometric failure (CIAF)	22
Table 4.1: Total participants of the present study	29
Table 4.2.1: Total participants of the nonindustrial area	29
Table 4.2.2: Socio-economic characteristics of nonindustrial area	30
Table 4.2.3: Demographic characteristics of nonindustrial area	31
Table 4.2.4: Self reported morbidity status of nonindustrial area	31
Table 4.3.1: Total participants of the industrial area	32
Table 4.3.2: Socio-economic characteristics of industrial area	33
Table 4.3.3: Demographic characteristics of industrial area	34
Table 4.3.4: Self reported morbidity status of industrial area	34
<u>Table 5.1.1 to 5.1.14 for girls</u>	
Table 5.1.1: Age specific area differences in height (cm)	50
Table 5.1.2: Age specific area differences in weight (kg)	50
Table 5.1.3: Age specific area differences in sitting height (cm)	51
Table 5.1.4: Age specific area differences in knee height (cm)	51
Table 5.1.5: Age specific area differences in MUAC (cm)	52
Table 5.1.6: Age specific area differences in HC (cm)	52
Table 5.1.7: Age specific area differences in WC (cm)	53
Table 5.1.8: Age specific area differences in BMI (kg/m²)	53
Table 5.1.9: Age specific area differences in CI	54
Table 5.1.10: Age specific area differences in WHR	54
Table 5.1.11: Age specific area differences in WHtR	55
Table 5.1.12: Age specific area differences triceps skinfold (mm)	55
Table 5.1.13: Age specific area differences in biceps skinfold (mm)	56

Table 5.1.14: Age specific area differences in sub-scapular skinfold (mm)	56
--	----

Table 5.2.1 to 5.2.14 for boys

Table 5.2.1: Age specific area differences in height (cm)	57
--	----

Table 5.2.2: Age specific area differences in weight (kg)	57
--	----

Table 5.2.3: Age specific area differences in sitting height (cm)	58
--	----

Table 5.2.4: Age specific area differences in knee height (cm)	58
---	----

Table 5.2.5: Age specific area differences in MUAC (cm)	59
--	----

Table 5.2.6: Age specific area differences in HC (cm)	59
--	----

Table 5.2.7: Age specific area differences in WC (cm)	60
--	----

Table 5.2.8: Age specific area differences in BMI (kg/m²)	60
---	----

Table 5.2.9: Age specific area differences in CI	61
---	----

Table 5.2.10: Age specific area differences in WHR	61
---	----

Table 5.2.11: Age specific area differences in WHtR	62
--	----

Table 5.2.12: Age specific area differences in triceps skinfold (mm)	62
---	----

Table 5.2.13: Age specific area differences in biceps skinfold (mm)	63
--	----

Table 5.2.14: Age specific area differences in sub-scapular skinfold (mm)	63
--	----

Table 5.3.1 to 5.3.14 for nonindustrial children

Table 5.3.1: Age specific sex differences in height (cm)	64
---	----

Table 5.3.2: Age specific sex differences in weight (kg)	64
---	----

Table 5.3.3: Age specific sex differences in sitting height (cm)	65
---	----

Table 5.3.4: Age specific sex differences in knee height (cm)	65
--	----

Table 5.3.5: Age specific sex differences in MUAC (cm)	66
---	----

Table 5.3.6: Age specific sex difference in HC (cm)	66
--	----

Table 5.3.7: Age specific sex differences in WC (cm)	67
---	----

Table 5.3.8: Age specific sex differences in BMI (kg/m²)	67
--	----

Table 5.3.9: Age specific sex differences in CI	68
Table 5.3.10: Age specific sex differences in WHR	68
Table 5.3.11: Age specific sex differences in WHtR	69
Table 5.3.12: Age specific sex differences in triceps skinfold (mm)	69
Table 5.3.13: Age specific sex differences in biceps skinfold (mm)	70
Table 5.3.14: Age specific sex differences in sub-scapular skinfold (mm)	70
<u>Table 5.4.1 to 5.4.14 for industrial children</u>	
Table 5.4.1: Age specific sex differences in height (cm)	71
Table 5.4.2: Age specific sex differences in weight (kg)	71
Table 5.4.3: Age specific sex differences in sitting height (cm)	72
Table 5.4.4: Age specific sex differences in knee height (cm)	72
Table 5.4.5: Age specific sex differences in MUAC (cm)	73
Table 5.4.6: Age specific sex differences in HC (cm)	73
Table 5.4.7: Age specific sex differences in WC (cm)	74
Table 5.4.8: Age specific sex differences in BMI (kg/m²)	74
Table 5.4.9: Age specific sex differences in CI	75
Table 5.4.10: Age specific sex differences in WHR	75
Table 5.4.11: Age specific sex differences in WHtR	76
Table 5.4.12: Age specific sex differences in triceps skinfold (mm)	76
Table 5.4.13: Age specific sex differences in biceps skinfold (mm)	77
Table 5.4.14: Age specific sex differences in sub-scapular skinfold (mm)	77
Table 6.1.1: Prevalence (%) of underweight among girls	89
Table 6.1.2: Prevalence (%) of stunting among girls	90
Table 6.1.3: Prevalence (%) of wasting among girls	91
Table 6.1.4: Prevalence (%) of thinness among girls	92

Table 6.2.1: Prevalence (%) of underweight among boys	93
Table 6.2.2: Prevalence (%) of stunting among boys	94
Table 6.2.3: Prevalence (%) of wasting among boys	95
Table 6.2.4: Prevalence (%) of thinness among boys	96
Table 6.3.1: Prevalence (%) of underweight among nonindustrial children	97
Table 6.3.2: Prevalence (%) of stunting among nonindustrial children	98
Table 6.3.3: Prevalence (%) of wasting among nonindustrial children	99
Table 6.3.4: Prevalence (%) of thinness among nonindustrial children	100
Table 6.4.1: Prevalence (%) of underweight among industrial children	101
Table 6.4.2: Prevalence (%) of stunting among industrial children	102
Table 6.4.3: Prevalence (%) of wasting among industrial children	103
Table 6.4.4: Prevalence (%) of thinness among industrial children	104
Table 6.5.1: Prevalence (%) of CIAF among school going children	105
Table 6.5.2: Area specific prevalence (%) of CIAF among school going children	105
Table 6.5.3.1: Age and area specific prevalence (%) of CIAF among girls	106
Table 6.5.3.2: Age and area specific prevalence (%) of CIAF among boys	107
Table 6.5.4.1: Age and sex specific prevalence (%) of CIAF among nonindustrial children	108
Table 6.5.4.2: Age and sex specific prevalence (%) of CIAF among industrial children	109
Table 7.1.1: Socio-economic characteristics	114
Table 7.1.2: Demographic characteristics	115
Table 7.1.3: Self reported morbidity status	115
Table 8.1.1: Association of socio-economic characteristics with nutritional of the children in nonindustrial area	119
Table 8.1.2: Association of demographic characteristics with nutritional status of the children in nonindustrial area	120

Table 8.1.3: Association of self reported morbidity status with nutritional status of the children in nonindustrial area	120
Table 8.2.1: Association of socio-economic characteristics with nutritional status of the children in industrial area	121
Table 8.2.2: Association of demographic characteristics with nutritional status of the children in industrial area	122
Table 8.2.3: Association of self reported morbidity status with nutritional status of the children in industrial area	122
Table 9.1.1: Factors associated with undernutrition among school going children of nonindustrial area	126
Table 9.1.2: Step wise logistic regression (forward conditional model) was used to identify the probable risk factors for undernutrition	126
Table 9.2.1: Factors associated with undernutrition among school going children of industrial area	127
Table 9.2.2: Step wise logistic regression (forward conditional model) was used to identify the probable risk factors for undernutrition.	127
Table 10.1.1.1: Comparison of mean height (cm) of the present study with regional studies	140
Table 10.1.1.2: Comparison of mean weight (kg) of the present study with regional studies	140
Table10.1.1. 3: Comparison of mean MUAC (cm) of the present study with regional studies	141
Table 10.1.1.4: Comparison of mean height (cm) of the present study with regional studies	141
Table 10.1.1.5: Comparison of mean weight (kg) of the present study with regional studies	142
Table 10.1.1.6: Comparison of mean MUAC (cm) of the present study with regional studies	142
Table 10.1.2.1 Comparison of mean height (cm) among girls of the present study with national studies	143
Table 10.1.2.2: Comparison of mean weight (kg) among girls of the present study with national studies	143
Table 10.1.2.3: Comparison of mean sitting height (cm) among girls of the present study with national studies	144
Table 10.1.2.4: Comparison of mean MUAC (cm) among girls of the present study with national studies	144

Table 10.1.2.5: Comparison of mean BMI (kg/m²) among girls of the present study with national studies	145
Table 10.1.2.6: Comparison of mean height (cm) among boys of the present study with national studies	145
Table 10.1.2.7: Comparison of mean weight (kg) among boys of the present study with national studies	146
Table 10.1.2.8: Comparison of mean sitting height (cm) among boys of the present study with national studies	146
Table 10.1.2.9: Comparison of mean MUAC (cm) among boys of the present study with national studies	147
Table 10.1.2.10: Comparison of mean BMI (kg/m²) among boys of the present study with national studies	147
Table 10.1.3.1: Comparison of mean height (cm) among girls of the present study with international studies	148
Table 10.1.3.2: Comparison of mean weight (kg) among girls of the present study with international studies	148
Table 10.1.3.3: Comparison of mean BMI (kg/m²) among girls of the present study with international studies	149
Table 10.1.3.4: Comparison of mean height (cm) among boys of the present study with international studies	149
Table 10.1.3.5: Comparison of mean weight (kg) among boys of the present study with international studies	150
Table 10.1.3.6: Comparison of mean BMI (kg/m²) among boys of the present study with international studies	150
Table 10.2.1: Comparison of prevalence of undernutrition among children of the present study with regional studies	151
Table 10.2.2: Comparison of prevalence of undernutrition among children of the present study with national studies	152
Table 10.2.3: Comparison of prevalence of undernutrition among children of the present study with international studies	153
Table 10.2.4: Comparison of prevalence of thinness among the children of different studies with present study	154
Table 10.2.5: Comparison of prevalence of CIAF among the children of different studies with present study	155
